

Build Smarter. Automate Faster. Grow with Technology.

FairBazaar builds intelligent SaaS products, custom software, AI solutions and digital platforms that help businesses automate operations, improve productivity and scale faster.

Technology solutions built around **your business**

FairBazaar is a technology company from Maharashtra, India. We build SaaS products such as FairBazaar HRMS, and we design and engineer custom software, AI solutions, CRM, ERP, web and mobile applications.

We don't sell one-size-fits-all software. We understand how a business works, design the technology architecture, build the product and help the organisation adopt it end to end.

“We are not just a software development company. We build the technology infrastructure that helps businesses operate, automate and grow.”

AI

Native by design

Mission, vision and values

OUR MISSION

Make powerful business technology accessible to every growing organisation.

Replacing manual work and disconnected tools with connected, intelligent systems, at a scale and budget that fits.

OUR VISION

Businesses that run on connected, AI-native operating systems.

Sales, operations, people and decisions share one intelligent backbone, so teams spend their time on work that matters.

What we believe

Business first

Technology decisions start from workflows, people and outcomes.

Trust by default

Security, privacy and honest communication are built in.

Build to last

Clean architecture and documentation that stay maintainable.

AI where it helps

Practical AI that is grounded, governed and measurable.

Adoption matters

Software creates value only when teams actually use it.

Fair by name

Transparent scope, fair pricing and full ownership for clients.

Our approach

1

Idea

2

Build

3

Launch

4

Scale

We start by understanding the business problem, design the architecture, build in visible sprints, launch with training and data migration, then keep improving as the business grows.

Platforms that **run your business**

Proven FairBazaar platforms, configured for your processes and extended with custom modules where you need something unique. Every product shares identity, permissions and data, so they work as one business operating system.

Available now

WORKFORCE

FairBazaar HRMS

Attendance, location-based check-in, payroll, leave, expenses and HR analytics in one platform.

Deployed per client

SALES

CRM

Leads, customers, deals, follow-ups and a pipeline shaped around how you sell.

Deployed per client

OPERATIONS

ERP

Inventory, purchasing, sales, finance and operations on one source of truth.

Deployed per client

SALES

Lead Management

Capture every enquiry, route it instantly and track source-wise conversion.

Deployed per client

OPERATIONS

Inventory

Real-time multi-location stock, batches, transfers and reorder alerts.

Deployed per client

AUTOMATION

Business Automation

Workflows, approvals, notifications and integrations across your systems.

Deployed per client

AI

AI Agents

Agents grounded in your data that answer, qualify and act, with human approval.

Deployed per client

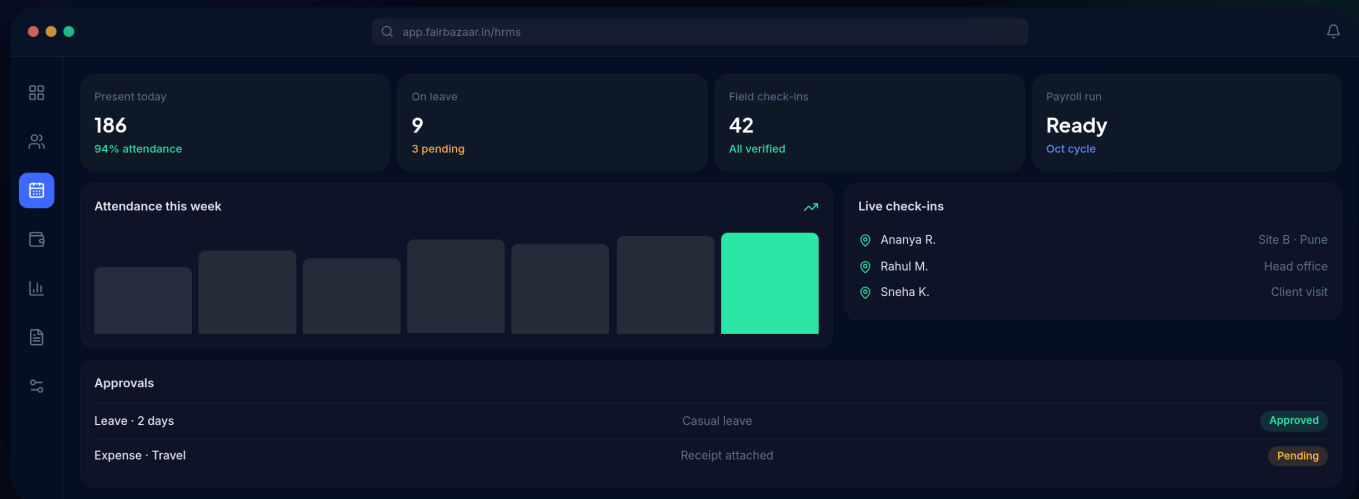

CUSTOM

Custom Business Software

Custom systems built on proven components: roles, audit, workflows, reports.

Your entire workforce. One intelligent platform.

Attendance, leave, payroll, expenses and performance in one connected platform, with location-verified check-ins for field teams and real-time dashboards for managers and HR.

Location-verified attendance

Geo-fenced mobile check-in for field and multi-site teams.

Attendance-linked payroll

Salaries calculated from attendance, leave and pay components.

Approvals on the go

Leave and expense approvals from web or mobile in one tap.

16 modules, one platform

- ✓ Employee Management
- ✓ Attendance
- ✓ Location-Based Attendance
- ✓ Payroll
- ✓ Leave Management
- ✓ Holiday Management
- ✓ Expense Management
- ✓ Invoice Management
- ✓ Performance Management
- ✓ Work Progress
- ✓ Employee Documents
- ✓ Reports
- ✓ HR Analytics
- ✓ Role-Based Access
- ✓ Manager Dashboard
- ✓ Admin Dashboard

From check-in to payroll, automatically

STEP 1

Employee checks in

STEP 2

Location verified

STEP 3

Attendance recorded

STEP 4

Manager notified

STEP 5

Leave approved

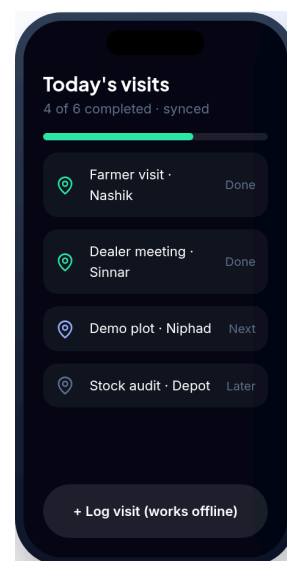

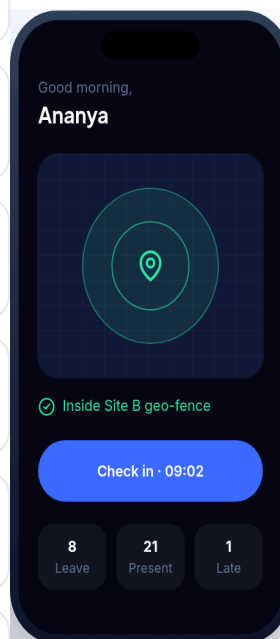

STEP 6

Expense submitted

STEP 7

Payroll calculated

STEP 8

Analytics updated

The right view for every role

Employees

Check in, apply for leave, submit expenses, view payslips and documents.

Managers

Approve requests, monitor team attendance and track work progress.

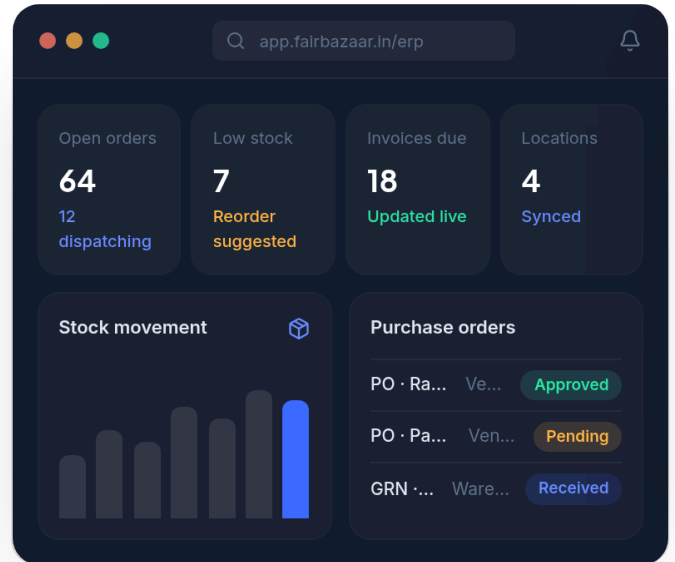

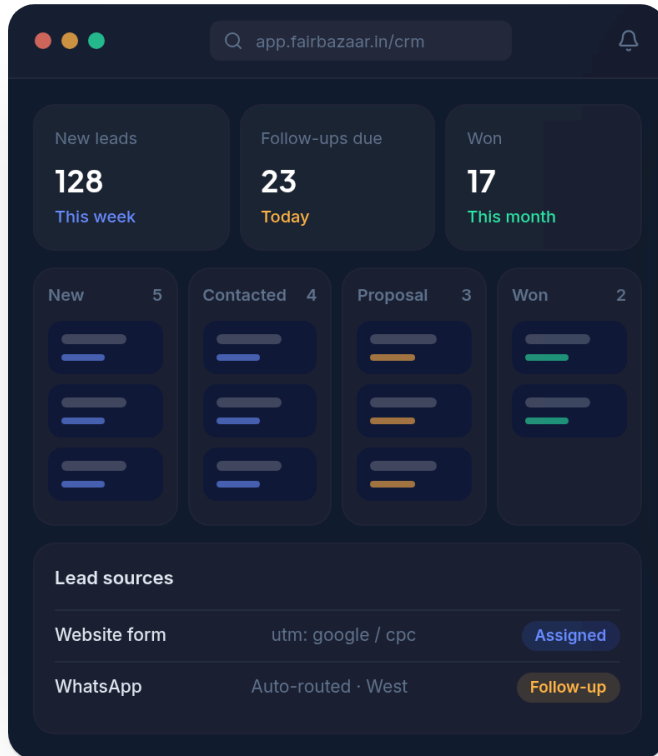

HR & Admin

Configure policies, run payroll, manage records and analyse workforce data.

- 📍 **Location-based attendance:** employees check in from the mobile app and their location is verified against geo-fences for each office or site, then flows straight into attendance and payroll.

One connected business operating system

Sales, operations and workflows share one data backbone, so a won deal, a stock movement and an approval are all part of the same story.

ERP & Inventory

Inventory · Purchasing · Sales · Finance · Operations · Employees · Reports

CRM & Lead Management

Leads · Customers · Deals · Follow-ups · Sales pipeline · Communication · Reports

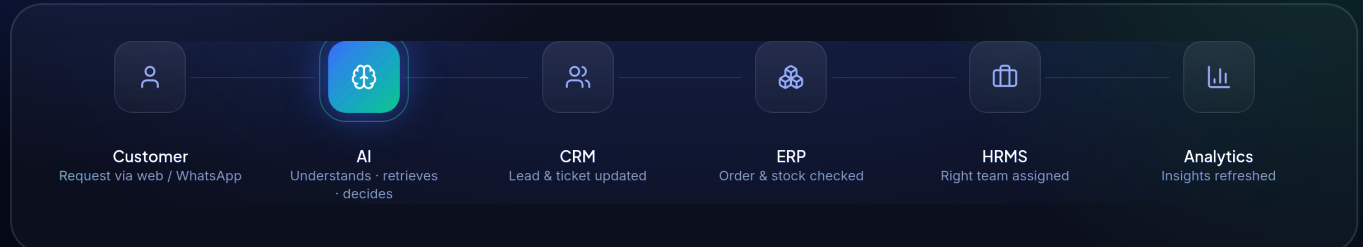

CRM → ERP A won deal creates a sales order

ERP → Automation Low stock triggers a purchase approval

Automation → CRM The customer is notified on dispatch

AI that works with your business

We develop AI agents and intelligent automation that understand business workflows, documents, customer requests and operational processes, and act inside the systems you already use.

- AI Agents

- RAG Systems

- LLM Applications

- Document Intelligence

- AI Customer Support

- AI Sales Assistants

- AI Workflow Automation

- AI Analytics

- AI Content Automation

- Custom AI Solutions

Customer support

Answers from your knowledge base with cited sources, around the clock on web and WhatsApp.

Sales assistance

Qualifies inbound leads, drafts follow-ups and updates the CRM automatically.

Document intelligence

Extracts and validates data from invoices, forms and contracts into your ERP.

✓ Grounded in your approved documents · permission-aware · human approval for sensitive actions · every step logged

From idea to impact, **one accountable team**

Dealer CRM, service job cards, spare parts

Professional Services

Practice CRM, time tracking, client portals

Startups

MVPs, SaaS architecture, AI features

SMEs

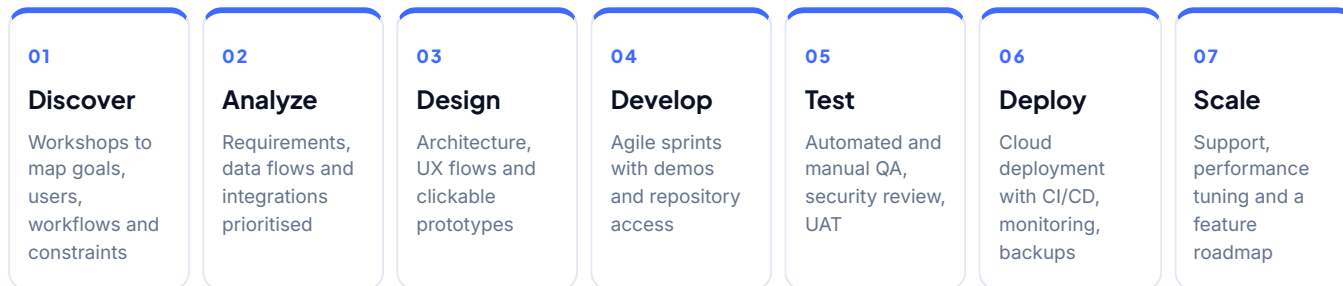

Phased digital transformation, CRM, HRMS, ERP

Enterprise

Custom apps, integrations, governed AI

A delivery model built on transparency

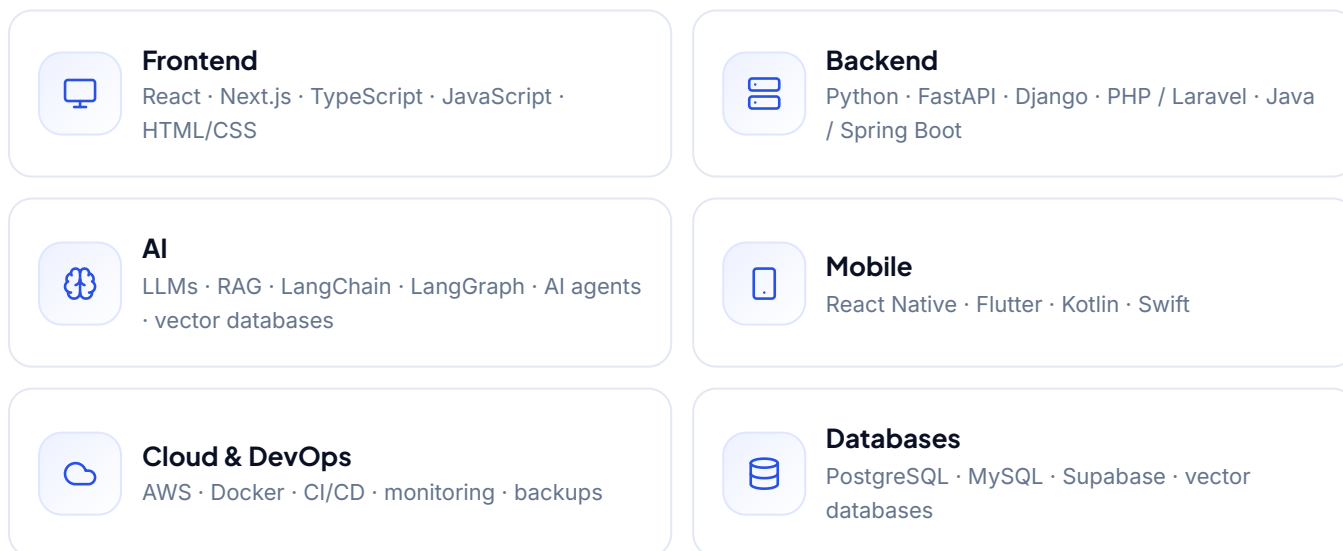

A focused MVP typically takes 8–14 weeks; larger platforms are delivered in phases, with the first usable release usually within 3–4 months.

Engagement models

Technology capabilities

Why organisations choose us

Products + custom engineering

Start on a proven platform and extend it with modules built for you.

AI-native team

LLMs, RAG and AI agents connected to real business systems.

Full ownership

On custom work, clients own the source code and data.

Transparent delivery

Working software every sprint and repository access from day one.

Security built in

Role-based access, audit logs, encryption and human approval for AI actions.

Phased investment

Start with the costliest process, prove value, then expand.

Have a business problem? Let's build the solution.
